SeongJae Park (SJ)

San Francisco, CA, USA | sj@kernel.org | https://sjp38.github.io | last update: 2026-10-23

Experience (Last 10 years)

Upstream Linux Kernel Programmer, Feb 2013 - **Present**

- Maintaining Linux kernel DAMON subsystem.
- Developing the upstream Linux kernel, mostly for DAMON and memory management.
- Authored ~1,500 Linux kernel mainline commits, as of 2026-08-28.

Staff Software Engineer, *Crusoe*, Oct 2025 - **Present**

- Developing Linux kernel for Crusoe Cloud.

Software Engineer, *Meta*, Sep 2024 - Oct 2025

- Developed Linux kernel for Meta infrastructure.
- Developed access-aware memory tiering, fleet-wide access pattern observability system and memory management subsystem optimizations (madvise() and zswap).

Kernel Development Engineer, *Amazon*, Sep 2019 - Sep 2024

- Developed Amazon Linux kernels for AWS internal/external users.
- Developed, upstreamed, and maintained Linux kernel DAMON subsystem.
- Developed DAMON features for AWS products including Aurora Serverless v2.

Graduate Research Assistant, *DCSLAB, Seoul National University*, Sep 2012 - Aug 2019

- Researched for high performance and scalability of memory management systems.
- Developed memory access pattern tracers and automated memory hint injection systems.
- Developed a NUMA-aware RCU extension and a scalable virtual memory system using it.
- Developed a physically contiguous memory allocator for THP and DMA.

Education

- Ph.D., Computer Science and Engineering at Seoul National University (Aug 2019)
- B.S., Electrical Engineering / Information and Computer Engineering (dual degree) at Ajou University (Feb 2009)

Selected Publications And Presentations

- **DAMON Presentation and Discussion Sessions.** SJ Park,
  Linux Plumbers Conference, 2019-2026,
  Linux Storage | Filesystem | MM & BPF Summit, 2023-2026, Kernel Recipes, 2025-2026,
  Open Source Summit Europe, 2023-2024,2026,
  Open Source Summit North America, 2023-2025, FOSDEM 2025.
- **DAOS: Data Access-aware Operating System.** SeongJae Park, Madhuparna Bowmik, Alexandru Uta. *ACM Symposium on High-Performance Parallel and Distributed Computing (HPDC)*, June 2022.
- **An HTM-Based Update-side Synchronization for RCU on NUMA systems.** SeongJae Park, Paul E. McKenney, Laurent Dufour, Heon Y. Yeom. *ACM European Conference on Computer Systems (EuroSys)*, April 2020.
